Diamond Edge Floor Pads

Diamond Edge is a new and revolutionary system that cleans and polishes floors mechanically without the use of chemicals. The Diamond Edge system consists of floor pads impregnated with billions of microscopic diamonds that will transform any dull, worn floor into a clean shining floor. The diamonds come in different sizes creating different levels of aggressiveness ideal for cleaning and polishing.

The system can be used on surfaces such as concrete, terrazzo, marble, ceramic and other natural stones as well as VCT when using the 1500 polishing pad and up.

Benefits:

- Cleaner, shinier floors
- Total cleaning cost reduction
- Environmentally friendly cleaning procedure
- Removes more bacteria than other cleaning methods
- No special equipment required
- No color transfer due to a naturally colored pad-no dyes added
- 40% more durable-tested next to competitive pads used in the field
- More heat generated
- Ease of use
- Quality you have come to know & expect from ACS

Suggested Diamond Edge Demonstration Procedure

For use on: concrete, terrazzo, granite, marble, and other natural stones

Preparation

1. Choose a well lighted area approximate 4' X 8'.
2. Floor must be smooth with minimal to no etch/damage.
3. Floors with floor finish must be stripped and rinsed (bare-bone).
4. Floors with no finish must be scrubbed & rinsed.

Demo Options

Depending on the floor condition it is recommended to use our 4 Pad Diamond Edge System beginning with Diamond Edge Red 400 and followed by Diamond Edge White 800, Diamond Edge Yellow 1500, and Diamond Edge Green 3000.

Step 1. Red 400

Wet the floor test area. Water acts as a lubricant and extends pad life. Using a low-speed rotary machine or auto scrubber, run the Diamond Edge 400 pad side to side for 7–10 passes, then repeat in the opposite direction. Rinse and vacuum thoroughly before proceeding.

Step 2. White 800

The wet method is also recommended for this step. Use water as lubricant and repeat the process detailed in Step 1. Rinse and vacuum thoroughly before proceeding. Finish this step by applying a thin coat of densifier. Wait 30-60 minutes until densifier is dry and not tacky.

Step 3. Yellow 1500

When the test area is dry, use the Diamond Edge 1500 pad with a high-speed or UHS burnisher (electric or propane). If unavailable, use a standard rotary machine or auto scrubber. Low speed: 7–10 passes. HS/UHS: 3–5 passes. Use the pad dry or with a light mist of water from a spray bottle. Rinse and vacuum thoroughly before proceeding.

Step 4. Green 3000

Repeat the process detailed in step 3 using a Diamond Edge 3000 pad. At the completion of this step, it is recommended to apply 1-2 thin coats of protector.

Maintenance

The following two steps are recommended for maintenance:

1. Clean polished floors well using a neutral cleaner and regular red pad.
2. Polish using Diamond Edge 3,000 Green pad a Diamond Edge 8,000 Orange Pad or a Diamond Edge 11,000 Purple Pad could also be used depending on the desired level of gloss
