BAGASSE MOLDED FIBER

Empress Earth Bagasse Products utilize what would commonly be a waste product from sugar production (residual sugar cane juice) to make a wide variety of sustainable products. Since sugarcane is a renewable plant, the by-product is a great raw material to use for products including bowls, plates, clamshells, trays and platters. Bagasse products are pressed in a high-heat, high-pressure process. They are heat tolerant and can even be put in the microwave or freezer.
