# Preventative Maintenance Best Practice

## Hard Water Challenges

**Scale Buildup:** When left untreated, hard water can clog plumbing systems with limescale. This can lead to a reduced lifespan of the plumbing equipment and other fixtures and appliances.

**Causes:** Scaling occurs when water with high levels of magnesium and calcium flows through plumbing systems and water lines and remains untreated.

**Harmful Health Effects:** Scale, corrosion, and biofilm growth all provide a habitat and nutrients for Legionella bacteria. Legionella bacteria is the cause of Legionnaires' disease, a severe type of pneumonia. People can get sick when they breathe in mist or accidentally swallow water into the lungs containing Legionella.

### WHAT TO DO:

**Regular Maintenance:** Regularly maintaining building water systems with CLR PRO® Calcium, Lime, and Rust Remover keeps fixtures and appliances in operating condition and also reduces the risk of Legionella growth and spread.

**Safety First:** Calcium, Lime, and Rust Remover is safe for employees and plumbing systems. Made of EPA Safer Choice ingredients like plant-based Lactic Acid. It's safe for surfaces and employee handling.
