

linear low density & high density liners
performance plus can liners

No matter the mess, no matter the job, Performance Plus Can Liners offer an effective solution for any situation.

Made of high quality resins, these innovative and technologically advanced liners are available in both high and low density polyethylene, offering maximum performance plus value for even the dirtiest of jobs. With a large variety of sizes, Performance Plus has a can liner to fit your needs!

LINEAR LOW DENSITY LINERS

Performance Plus Item #	Size (WxL)	Film color	Pack Type	Capacity	Bags/Cs	Bags/Roll	Rolls/Cs	Performance Strength	Net Wt.
PL3036XHB	30x36	Black	Interleaved	20-30 Gal.	250	25	10	Extra Heavy	15.2
PL3036XHW	30x36	White	Interleaved	20-30 Gal.	200	25	8	Extra Heavy	12.1
PL333915B	33x39	Black	Interleaved	33 Gal.	100	10	10	Municipal	9.4
PL333915C-150	33x39	Clear	Interleaved	33 Gal.	150	6	25	Municipal	13.9

PICK THE CORRECT CAN LINER:

In order to pick the correct Can Liner, look for the proper Resin, Gauge, Sizing and Seal to fit your needs.

I. RESIN:

The basic raw material used in can liner manufacturing. The two basic types most commonly used are High Density and Linear Low Density, each with their own unique advantages:

Linear Low Density:

- Superior stretch properties minimizes punctures and tearing.
- An excellent choice for waste with sharp or jagged edges.
- Great multi-purpose liner material.

High Density:

- Up to 3x stronger and half the weight of LLD.
- An economical choice for heavy, soft, wet refuse.
- Superior vapor and also moisture protection allows for USDA & FDA approval for food use.
- Require smaller, lighter cases, which lower freight, storage, and warehousing costs.
- More temperature resistant than LLD (-40° to +212° F).

2. GAUGE:

The measure of a can liner's thickness. Usually expressed in mils or microns.

Mil:

A thousandth of an inch. Low-density can liners range from .30 to 2.0 mils. (Convert a mil to a micron by multiplying by 25.4.)

Micron:

One millionth of a meter. High-density can liners can range from 6 to 24 microns. (Convert a micron to a mil by dividing by 25.4.)

3. SIZING:

Each container should have a gallon capacity, or size printed on it. Refer to the container chart on the back of this brochure for pictures of actual trash container types. Match the picture to your receptacle and it will tell you which size liner you need.

Width:

To calculate the proper width for your container, divide the circumference of the container by 2.

Square Circumference:

Sum of all 4 sides.

Round Circumference:

Diameter multiplied by 3.14.

Length:

For round and square containers, add 4–5 inches (for overhang) to the height of the container.

4. SEAL: There are three typical methods for sealing the bottom of a liner, Flat Seal, Gusset Seal and Star Seal. Performance Plus liners are all Star Seal Bottoms.

STAR SEAL:

- Created by folding the liner bottom over several times, then sealing
- Virtually eliminates leaks
- Conforms well to many container shapes
