

Turn the Dial on Confidence

The NSF Nonfood Compounds Registration Program

Safety and Quality Assured

Since 1999, the NSF Nonfood Compounds Registration Program has helped manufacturers formulate and market safe chemical products for use in food and beverage processing facilities. Registration into the program ensures product formulations have been validated by an independent, third-party review for safety and non-toxic properties. Once a product meets NSF requirements, it receives a unique registration number and NSF registration mark.

When it comes to earning an NSF Registration, one size does not fit all. In fact, our hand soaps and sanitizers are registered in only two category codes: NSF E2 for hand soaps and NSF E3 for sanitizers. **When it comes to killing bacteria in your facilities and restaurants, you need the confidence in knowing your hand hygiene products are helping protect your staff, guests and reputation. You need Dial® Professional.**
